

LIST OF FIGURES

Fig. 1.1	Factors Affecting Crop Yield	2
Fig. 1.2	Different Tiers of Decision Making	4
Fig. 1.3	Agro-Climatic Zones of Rajasthan	7
Fig. 1.4	Land Distribution pattern in Rajasthan 2018-19 (in %)	10
Fig. 1.5	Average Crop Water Requirement (in cm) of Different Crops	13
Fig. 1.6	Irrigational Resources in Rajasthan	14
Fig. 1.7	Systematic Framework for Analysis	16
Fig. 1.8	Methodology Followed for an Analysis	17
Fig. 1.9	Systematic Flow of Research Work	19
Fig. 3.1	Trend in Food Crop Production in India 1950 to 2018	48
Fig 3.2	Fi Land-Use Pattern in Rajasthan (1960-2001)	50
Fig. 3.3	Crop Yield Variability-Respond to Climate Chang	61
Fig. 3.4	Decision-Making Process	63
Fig. 3.5	Systematic Framework for Optimal Crop Selection	64
Fig. 3.6	Scatterplot of the Yield Versus the Climate Parameters	65
Graph 3.1	Impact of Pearl millet on Sorghum	69
Graph 3.2	Impact of Pearl millet on Green gram	69
Graph 3.3	Impact of Pearl millet on Maize	70
Graph 3.4	Impact of Sorghum on Green Gram	71
Graph 3.5	Impact of Maize on Sorghum	72
Graph 3.6	Impact of Maize on Green Gram	72
Graph 3.7	Impact of Wheat on Mustard	74
Graph 3.8	Impact of Barley on Wheat	74
Graph 3.9	Impact of Wheat on Black gram	75
Graph 3.10	Impact of Barley on Black gram	77
Graph 3.11	Impact of Barley on Mustard	77
Graph 3.12	Impact of Mustard on Black Gram	78
Fig. 4.1	Statistics for Analysis	83
Fig. 4.2	Variability in the Estimated Parameters	89
Fig. 4.3	Mathematical Framework for Evaluation of Climate Parameters	91
Graph 4.1	Residual Versus Predicted Plots (Pearl Millet)	94
Graph 4.2	Residual Versus Predicted Plots (Maize)	95

Graph 4.3	Residual Versus Predicted Plots (Mustard)	97
Graph 4.4	Residual Versus Predicted Plots (Wheat)	98
Fig. 5.1	Soil Parameters Impacting Crop Production	104
Graph 5.1	Average net return tillage versus non-tillage practices	105
Fig. 5.2	Germination Rate Under Different pH Values	106
Fig. 5.3	Soil Parameters and Reviewed Mathematical Models	108
Fig. 5.4	Comparison of Crop Yield Based on Farm Practices	109
Fig. 5.5	Performance of predicted models (a) temperature model, (b) Nitrogen model, (c), Carbon model, and (d) Sodium model	110
Fig. 6.1	Framework for MOORA and TOPSIS- for Crop Selection	117
Fig. 6.2	Framework for Crop Pattern Selection of Rabi Crops	120
Fig. 6.3	Systematic diagram for calculating weights	122
Fig. 6.4	Criteria and Weights Assigned to Attributes for Rabi Season Crop Pattern Selection	124
Fig. 6.5	Classification of Weighting Method in Multi-Criteria Decision Making	125
Fig. 6.6	Methodological Framework	126
Fig. 6.7	Systematic View of MOORA Method	128
Fig. 6.8	Ranking of Rabi Season Crops based on Performance Index	131
Fig. 6.9	TOPSIS Method	132
Fig. 6.10	Ranking of Rabi Season Crops based on Closeness Coefficient	137
Fig. 6.11	MCDM Methodologies Result for Crop Pattern Analysis in Rabi Season	139
Fig. 7.1	Traditional Paradigm Decision-Making	143
Fig. 7.2	The Systematic MCDM Process	144
Fig. 7.3	MCDM Techniques Applied for Analysis	146
Fig. 7.4	Weighted Normalise Value of the Attributes	149
Fig. 7.5	Comparative Analysis of MCDM Techniques	151
Fig. 7.6	Comparative Analysis of MCDM Techniques	154
Fig. 7.7	Comparison of MCDM techniques	158
Fig. 7.8	MCDM Technique for Optimal Crop Combination Selection	159

LIST OF TABLES

Table 1.1	Position of Rajasthan on Basis of Crop Production	7
Table 1.2	Soil and Vegetation Distribution in Rajasthan	9
Table 1.3	Different Cropping Techniques	12
Table 3.1	Land-Use Pattern in Rajasthan	49
Table 3.2	Cost of Cultivation of each Crop per Hectare (000'Rs.)	56
Table 3.3	Optimal value of the decision variable	56
Table 3.4	Optimal Solution of the MOLP Problem (Rabi Season Crops)	58
Table 3.5	Optimal Solution of the LP Problem (Kharif Season Crops)	59
Table 3.6	Multiple Crop Choice Regression Model (Kharif Season)	67
Table 3.7	Multiple Crop Choice Regression Model (Maize-Green Gram-Sorghum)	70
Table 3.8	Multiple Crop Choice Regression Model (Rabi season)	73
Table 3.9	Multiple Crop Choice Regression Model (Barley-Mustard-Black Gram)	75
Table 4.1	Descriptive Statistics use for Estimation	87
Table 4.2	Phillips—Perron Unit Root Test Results	89
Table 4.3	Impact of climate on mean and variance of Pearl Millet in Rajasthan	93
Table 4.4	Impact of climate on mean and variance of Maize in Rajasthan	94
Table 4.5	Impact of climate on mean and variance of Mustard in Rajasthan	96
Table 4.6	Impact of climate on mean and variance of Wheat in Rajasthan	97
Table 4.7	Test statistics of Pooled, Fixed and Random Model	98
Table 4.8	Hausman Test Result	99
Table 4.9	Estimated results for Breusch and Pagan Lagrangian multiplier	100
Table 4.10	Elasticities of Rainfall and Temperature	100

Table 5.1	Soil Distribution in Rajasthan	111
Table 6.1	Calculation of Weights of evaluation criteria for Rabi Crops	123
Table 6.2	Normalized Decision Matrix of Rabi Season Crop	129
Table 6.3	Normalized Weighted Decision Matrix of Rabi Crop	130
Table 6.4	Ideal Solution of Rabi Crops	131
Table 6.5	Weighted Normalized Decision- Matrix	133
Table 6.6	Positive-Ideal Weighted Normalized Matrix	135
Table 6.7	Negative-Ideal Weighted Normalized Matrix	136
Table 6.8	Positive and Negative Distances and Closeness Coefficients of Rabi Crops	137
Table 6.9	MOORA and TOPSIS Overall Crop Performance Comparative Analysis	138
Table 7.1	MCDM Techniques	141
Table 7.2	Mean Evaluation Values (design/decision matrix)	147
Table 7.3	Weighted Normalized Mean Values of the Attributes	148
Table 7.4	TOPSIS, MOORA, GRA, EDAS and PSI Results and Rank	150
Table 7.5	COPRAS, ARAS, WSM, WPM and WASPA results and rank	153
Table 7.6	Comparison of MCDM technique	157
